PERFECT SKIN PROGRAM

medixa®

### SMOOTHING FACE SERUM

Suitable for all skin types

is a dermocosmetic with glycolic acid suitable for all skin types. It is suitable both for young skin with imperfections and for mature skin, even for men's skin, in which it helps to reduce the depth of wrinkles.

THE SMOOTHING FACE SERUM stimulates and regenerates the skin of the face thanks to the presence of glycolic acid in active concentration. The synergy of glycolic acid with selected ingredients ensures the best tolerability on all skin types. It guarantees intense hydration and, thanks to the low pH, also an increase in skin turgor, which results in a compact and uniform skin.

### MOISTURIZING AND RESTORING CREAM

Indicated for dry skin

provides the nutrients and substances that restore normal skin protection. It is indicated in constitutionally dry skin and also as a normalizer. In cases where external events have altered the natural hydrolipidic film. The nourished and protected skin will remain soft and hydrated for a long time.

### MOISTURIZING AND RESTORING CREAM

Suitable for normal or combination skin

provides the nutrients and protective substances that even normal or combination skin needs to maintain optimal hydration of the skin of the face, neck and décolleté, plus it retains the skin's natural hyaluronic acid preventing its degradation, since the skin, as we age, tends to lose the natural quantity of acid which is so important for skin tropism.
