

NEUTROX[®] PEPTY

NEUTRALIZING SOLUTION PEPTIDES

NEUTRALIZING SOLUTION WITH BIOMIMETIC PEPTIDES

For the rebalancing PH of the skin after acid peeling treatments. The refreshing texture gives the skin an immediate feeling of relief.

Indicated for:

Product suitable for all skin types, restores the right water balance and soothes the skin after peeling of different types. Contains chamomile and aloe extract for noticeable calming effects: chamomile is part of the Esteraceae family and its flowers contain many useful properties for our well-being; in particular chamomile also affects on an antioxidant, antipyretic, antibacterial and analgesic level. Aloe, on the other hand, is a plant used for its emollient and healing properties, which benefits go beyond the usual skin and hair care. It is an ideal natural cosmetic remedy for those who suffer from acne, for dry, reddened skin and is even effective for preventing and lightening stretch marks. The peptides present in the formulation contain amino acids, which are used by the skin to produce proteins such as collagen, elastin and keratin. These substances hold the cells together and keep the skin toned. Biomimetic peptides allow you to achieve specific results such as wrinkle reduction, hydration or restoration of the skin barrier.

How to use:

After each acid peeling treatment, apply with a spatula on the face and neck. Avoid contact with eyes and lips. Remove after 1 minute with plenty of water. Make sure that the removal is perfect. Finish the treatment with the same solution to maintain the peeling effect.

Xmedipeel

PEELING CAN BE CLASSIFIED INTO:

Xpeeling
SURFACE

Xpeeling
MEDIUM

Xpeeling
DEEP

Superficial Peeling acts only on the stratum corneum, to allow a good penetration of the active ingredients applied to the skin. A medium or deep peeling is more indicated in the presence of skin that is very damaged by photo and chrono-aging, with rather deep wrinkles, furrows and widespread discoloration, however a home stay period is required during which the skin exfoliation is completed that results more visible. As for the deep peeling, performed with phenol, an outpatient intervention with anesthetic assistance is required.

Fenox

PHENOLIC ACID

FENOX is a professional peeling based on natural smoothing oil preserved by Phenolic Acid

Indications:
